

Tom Gergel
tom.gergel@bentley.com

I have been working in the GIS-T arena since the early 1990's. Amazing to see how much has changed with technology and at the same time how little has changed.

Company: Bentley Systems

Education: BS Geography, MS Geography

Interests: Linear Referencing, CADD/GIS Integration, Asset Management

GIS Achievement: Working with a startup company, TransDecisions, to provide dynamic segmentation inside of an Oracle Spatial database back in 2000. Really fun times.

What I like about MAGTUG: Local Transportation group talking about the day to day solutions we all need to address our critical transportation infrastructure needs

Factoid: Watched the first dynamic segmentation maps being created at Connecticut DOT and Pennsylvania DOT back in the mid-1990's
